Curaçao Airport Partners Carbon Policy

Curaçao Airport Partners N.V. (CAP) is committed to protecting the environment and reducing the impact of its airport operations.

CAP is committed to protecting the health, safety, and well-being of its employees, stakeholders, airport users, and visitors. CAP is also committed to reducing greenhouse gas emissions from its operations and working towards carbon neutrality through clear goals and actions within the next 5-10 years. These efforts support the objectives of the Paris Agreement.

To support this commitment, CAP will:

- Promote environmental responsibility among employees, tenants, customers, passengers, and other stakeholders.
- Set, review, and maintain measurable environmental objectives and targets.
- Improve energy efficiency and explore sustainable energy sources.
- Provide training and awareness programs on environmental responsibility.
- Comply with local environmental laws, contractual obligations, and applicable international sustainability standards.
- Reduce vehicle emissions by moving toward more fuel-efficient vehicles and sustainable transportation options where possible.
- Replace old equipment with energy-efficient alternatives.
- Reduce waste and reuse materials where practical.
- Improve wastewater treatment through on-site solutions and municipal recycling options where possible.
- Measure and monitor greenhouse gas emissions to support continuous reduction.
- Engage airlines, clients, and stakeholders to support shared environmental goals and address non-compliance when needed.
- Review the financial resources needed for carbon reduction projects and allocate them responsibly.
- Develop a solar park to increase renewable energy use and improve long-term energy sustainability.

CAP will include climate considerations in its decisions, investments, and airport operations to support a sustainable and resilient future.

Ricardo Hernández
